

Individuals are eligible to qualify for special certification ratings. These ratings enable consumers to easily identify solar contractors who have proven up-to-date qualifications in the areas of active solar thermal and photovoltaic solar energy systems.

To obtain the "CoSEIA Certified" rating, individuals must pass a comprehensive test for active, and/or photovoltaic solar system maintenance, repair, and installation. Additionally, the "CoSEIA Certified" individual must take a minimum of 12 hours of CoSEIA sponsored or approved class work each year to maintain his/her certification. Look for the "CoSEIA Certified" rating to be assured of the highest quality services in Colorado's solar industry.

When browsing through the CoSEIA Directory, you will be able to identify those individuals certified by CoSEIA. Their CoSEIA categories of certification are included in the listing and are highlighted in red.
